SPECTRUM 5.1

Complete Software Compliance Requirements

Detailed field-by-field breakdown for all 21 procedures

This document details every data field, functional requirement, and minimum standard that a collections management system must support to be fully Spectrum 5.1 compliant. Primary procedures (required for UK Accreditation) are marked with ★.

★ 1. OBJECT ENTRY

Object Entry records all objects coming into your care for any reason — potential acquisitions, enquiries, loans in, and returns — before any decision is made about their future. It acts as a receipt system and the first point of identification.

Minimum Requirements (from Spectrum Standard)

Minimum Requirement	Why This Matters
Account for all objects left in your care	You cannot lose track of objects left as enquiries
Record clear terms & conditions for accepting objects	Prevents being responsible for unwanted objects
Record WHY objects have been left (entry reason)	Prevents wrongly processing a loan as an acquisition
Schedule default return if not acquired/loaned	Prevents unclear object status accumulating
Record legal owner of objects left with you	Enables dealing with the right person for acquisition
Assess and mitigate risks from incoming objects	Enables quarantine of potentially pest-infested items
Record significant information about newly arrived objects	Captures provenance while owner is present
Record liability for loss/damage in your care	Protects both parties financially and legally
Provide a signed receipt to the depositor	Confirms owner accepts your terms and conditions
Uniquely identify every newly arrived object	Prevents confusion between similar-looking objects

Required Data Fields — Object Entry Record

Field Name	Type	Required ?	Notes / Purpose
Entry number	Auto-generated ID	Mandatory	Unique identifier for this entry event (e.g. OE-2024-001). Must be system-generated or manually assigned at point of entry.
Entry date	Date	Mandatory	Date the object(s) arrived. Triggers retention scheduling.
Depositor name	Text / Linked person record	Mandatory	Name of the individual or organisation leaving the object. Should link to a Person/Organisation record.
Depositor contact details	Address / phone / email	Mandatory	Needed to return the object or discuss acquisition.
Entry reason	Controlled vocabulary	Mandatory	Why the object has been left: e.g. Potential acquisition, Loan in, Enquiry, Return from loan, Found in collection.
Object description	Text	Mandatory	Basic description to identify the object(s) — name, materials, brief description. Not a full catalogue entry.
Number of objects	Integer	Mandatory	Count of all objects in the entry, including any parts or associated items.
Current owner / legal title holder	Text / Linked record	Mandatory	Who legally owns the object(s) — may differ from the depositor.
Terms and conditions accepted	Boolean / Signature field	Mandatory	Record that the depositor has agreed to your standard T&Cs. Ideally a digital signature or checkbox with date.

Field Name	Type	Required ?	Notes / Purpose
Liability statement	Text / Reference to policy	Mandatory	The liability position recorded against the entry — what the museum is/isn't responsible for.
Receipt issued	Boolean + date	Mandatory	Confirms a formal receipt was given to the depositor.
Risk assessment notes	Text	Recommended	Notes on any potential risks: pest infestation, hazardous materials, structural fragility.
Quarantine required	Boolean	Recommended	Flag to indicate the object needs to be isolated before integration with the collection.
Condition on entry	Text / Controlled vocab	Recommended	Brief condition note at the point of entry to protect against later damage claims.
Return deadline / scheduled return date	Date	Recommended	Default return date if no decision is made — prevents indefinite retention of enquiry objects.
Outcome of entry	Controlled vocabulary	Mandatory	What happened next: Returned to depositor, Acquired, Transferred to loan record, Disposed of, Pending decision.
Object entry method	Controlled vocabulary	Optional	How the object arrived: Handed in at desk, Posted, Collected, Transferred from another institution.
Associated documentation	File attachment / reference	Optional	Any letters, emails, forms, or provenance documents that accompanied the object.
Photographs / images	Image attachment	Recommended	At least one image taken on arrival to record condition and appearance.
Related acquisition record	Linked record	Conditional	Link to the Acquisition & Accessioning record if the object is subsequently acquired.
Related loan record	Linked record	Conditional	Link to the Loans In record if the entry transitions to a formal loan.
Staff member responsible	Linked user / text	Mandatory	Who received the object and processed the entry record.

Software Functional Requirements for Object Entry

- Auto-generate unique entry numbers (sequential or formatted)
- Allow linking of entry records to Person/Organisation records
- Provide controlled vocabulary dropdowns for 'entry reason' and 'outcome'
- Ability to print or email a receipt to the depositor
- Scheduling/reminder functionality for scheduled return dates
- Image/document attachment capability
- Ability to transition an entry record into an Acquisition or Loans In record (workflow linkage)
- Audit trail — record of who created/edited the entry and when

★ 2. ACQUISITION AND ACCESSIONING

Acquisition is the formal transfer of legal title. Accessioning is the formal commitment to preserve an object as part of the permanent collection. These may happen simultaneously or separately. Not all acquired objects are accessioned (e.g. handling collections, display props).

Minimum Requirements

Minimum Requirement	Why This Matters
Document legal transfer of title to your organisation	Proves ownership; essential for insurance and legal protection
Check the object against your collecting policy before acquisition	Prevents acquiring objects outside your remit
Verify legal and ethical status of the object (provenance, CITES, etc.)	Prevents handling stolen, looted, or illegally traded objects
Assign a unique accession number to each accessioned object	Core identifier linking all future records about the object
Record the method of acquisition	Distinguishes purchases, gifts, bequests, transfers, fieldwork
Record acquisition date and authorising body/person	Demonstrates governance and appropriate authority
Record the source (previous owner/donor)	Needed for provenance, donor relations, and legal title chain
Record what was paid or the agreed value (if purchase or bequest)	Needed for insurance, audit, and financial records
Mark the object with its accession number	Physical link between the object and its record
Notify the depositor of the decision	Required for ethical and legal reasons
Keep associated paperwork (deeds of gift, purchase receipts)	Required for audit and legal evidence of title

Required Data Fields — Acquisition Record

Field Name	Type	Required ?	Notes / Purpose
Accession number	Auto / formatted text	Mandatory	Unique permanent identifier for the object in the collection. Format typically: YYYY.NNN or YYYY.NNN.N for parts.
Accession date	Date	Mandatory	Date the object was formally accessioned into the permanent collection.
Acquisition date	Date	Mandatory	Date legal title transferred — may differ from accession date.
Method of acquisition	Controlled vocabulary	Mandatory	e.g. Purchase, Gift, Bequest, Transfer, Fieldwork, Found in collection, Exchange.
Source / previous owner name	Text / Linked person record	Mandatory	Individual or organisation that transferred title. Crucial for provenance chain.
Source contact details	Address / phone / email	Mandatory	For correspondence and future donor relations.
Acquisition reason / justification	Text	Mandatory	How the object fits the collecting policy — rationale for acquisition.

Field Name	Type	Required ?	Notes / Purpose
Purchase price / agreed value	Currency	Conditional	Required if purchased, exchanged, or subject to a bequest valuation.
Authorising person / body	Linked user / text	Mandatory	Who approved the acquisition — individual curator, director, governing body.
Authority date	Date	Mandatory	When formal authorisation was granted.
Title guarantee / legal basis	Text / Controlled vocab	Mandatory	Evidence of clean title: e.g. Deed of Gift, Bill of Sale, Transfer document.
Associated documentation reference	File attachment / text	Mandatory	Reference to deeds of gift, purchase receipts, correspondence — or file attachment.
Object description	Text	Mandatory	Basic description linking back to (or expanding from) the Object Entry record.
Provenance summary	Text	Recommended	Known history of the object's ownership before acquisition.
Legal / ethical status checks completed	Checklist / Boolean fields	Mandatory	Records of checks against: Art Loss Register, CITES, Dealing in Cultural Objects Act, Human Remains guidance, etc.
Associated object entry record	Linked record	Recommended	Link back to the original Object Entry if applicable.
Copyright / IP status	Text / Controlled vocab	Recommended	Initial note on copyright situation for the object and associated materials.
Conditions attached to acquisition	Text	Recommended	Any restrictions imposed by the donor, e.g. must always be displayed, cannot be deaccessioned.
Number of objects in acquisition	Integer	Mandatory	Count of all items being acquired under this accession number.
Object type / collection area	Controlled vocabulary	Recommended	Broad classification to aid collection management and reporting.
Location after accessioning	Linked location record	Recommended	Where the object was placed immediately after being formally accessioned.
Acknowledgement sent to donor	Boolean + date	Recommended	Confirms the donor was formally thanked/notified.
Accession register entry	Boolean / Reference	Mandatory	Confirms the object has been entered into the accession register (main legal record of the collection).

Software Functional Requirements for Acquisition & Accessioning

- Auto-generation of accession numbers in a configurable format
- Controlled vocabulary for acquisition method — editable by administrators
- Provenance/ethics checklist — trackable fields for each required check
- Ability to attach scanned documents (deeds of gift, receipts)
- Workflow link from Object Entry record to Acquisition record
- Accession register — a permanent, chronological log of all accessions
- Ability to flag/distinguish accessioned objects from non-accessioned acquisitions (handling collections etc.)

- Donor/source management — linking to Person/Organisation records
- Reporting: new acquisitions by period, method, collection area

★ 3. LOCATION AND MOVEMENT CONTROL

Every object must have a known, recorded location at all times. Every time an object moves, the move must be recorded — including internal movements within the building. This is fundamental to accountability.

Minimum Requirements

Minimum Requirement	Why This Matters
Know and record the current location of every object in your care	Core accountability — you must be able to find every object
Record a movement every time an object changes location	Creates a full movement history and current location
Record who authorised and carried out each movement	Establishes responsibility for the object at every point
Record the date and time of every movement	Enables audit trail and accountability
Have a system of location names/codes covering all storage and display areas	Without consistent location codes, location records are meaningless
Keep location records up to date promptly after every move	Out-of-date records are as bad as no records

Required Data Fields — Location Record

Field Name	Type	Required ?	Notes / Purpose
Object number	Linked record	Mandatory	The accession number (or entry number) of the object being located.
Current location	Controlled vocabulary / linked location	Mandatory	The current location of the object using the agreed location hierarchy (building > room > bay > shelf etc.).
Location date	Date + time	Mandatory	When the object arrived at this location.
Previous location	Controlled vocabulary / linked location	Mandatory	Where the object was before — automatically populated from prior record.
Movement reason	Controlled vocabulary	Mandatory	e.g. Conservation, Photography, Exhibition, Audit, Loan, Return from loan, Internal rearrangement.
Authorised by	Linked user / text	Mandatory	Who gave permission for the movement.
Moved by	Linked user / text	Mandatory	Who physically moved the object.
Movement date	Date	Mandatory	Date the movement occurred.
Expected return date	Date	Conditional	Required if the movement is temporary (e.g. for conservation, photography, or loan).
Expected return location	Controlled vocabulary / linked location	Conditional	Where the object should return to after a temporary move.
Movement notes	Text	Optional	Any special instructions or notes about the move.
Related process record	Linked record	Conditional	Link to Loans Out, Conservation, Condition Check, or other related process record.

Required Data Fields — Location Hierarchy

Field Name	Type	Required ?	Notes / Purpose
Location code	Text	Mandatory	Unique code for each location (e.g. STORE-A-BAY3-SHELF2).
Location name	Text	Mandatory	Human-readable name for the location.
Location type	Controlled vocabulary	Mandatory	e.g. Gallery, Store, Conservation lab, Loans staging, Off-site store.
Parent location	Linked location	Recommended	Enables hierarchical location structure (building > floor > room > bay > shelf).
Location notes	Text	Optional	Environmental conditions, access restrictions, or other notes.
Active / inactive	Boolean	Recommended	Flag to retire old locations without deleting their history.

Software Functional Requirements for Location & Movement Control

- Hierarchical location management (multi-level: building, room, bay, shelf, etc.)
- Movement logging — every save of a new location auto-creates a movement record with date/time stamp
- Current location always visible on the object record
- Full movement history accessible from the object record
- Ability to move multiple objects at once (batch location update)
- Location reports — list all objects currently in a given location
- Overdue return alerts — flag objects that have not been returned by expected return date
- Integration with Loans In/Out, Conservation, Audit processes

★ 4. INVENTORY

Inventory is the process of verifying that the objects recorded as being in your collection are actually present and in their recorded locations. It is the foundation of accountability. Every museum should have a plan to complete a full inventory, and then maintain it on a rolling basis.

Minimum Requirements

Minimum Requirement	Why This Matters
Have an inventory record for every object in your collection	Without a basic record for every object, you cannot demonstrate accountability
Be able to confirm whether objects are present in their recorded locations	Core function — verifying that records match reality
Record the outcome of every inventory check against each object	Enables tracking of discrepancies, losses, and found objects
Have a plan to complete and maintain your inventory	Required for Accreditation — you must show progress or completion
Record objects found in the collection with no existing record	Found-in-collection objects must be documented

Required Data Fields — Inventory Record (per object)

Field Name	Type	Required ?	Notes / Purpose
Object number / reference	Text	Mandatory	The object's unique identifier — accession number, entry number, or temporary reference.
Object name / brief description	Text	Mandatory	Minimum identification — enough to find the physical object.
Current location	Linked location	Mandatory	Where the object should be (or was found to be).
Inventory date	Date	Mandatory	When this object was last checked.
Inventory outcome	Controlled vocabulary	Mandatory	e.g. Present and correct, Present — location differs from record, Not found, Found in collection (no prior record).
Inventoried by	Linked user / text	Mandatory	Who performed the physical check.
Discrepancy notes	Text	Conditional	Required if outcome is anything other than 'Present and correct'.
Action required	Controlled vocabulary / text	Conditional	e.g. Update location record, Investigate loss, Create new record, Refer to curator.
Action completed	Boolean + date	Recommended	Confirms the discrepancy has been resolved.
Inventory method	Controlled vocabulary	Optional	e.g. Physical inspection, Barcode scan, RFID, Photographic verification.

Required Data Fields — Inventory Exercise (overall)

Field Name	Type	Required ?	Notes / Purpose
Inventory exercise reference	Auto ID / text	Mandatory	Unique reference for the overall inventory exercise.
Scope of inventory	Text / Controlled vocab	Mandatory	What was covered: full collection, specific store, specific collection area.
Date started	Date	Mandatory	When the inventory exercise began.
Date completed	Date	Conditional	When completed (if finished).
Number of objects checked	Integer	Mandatory	Running total updated as inventory progresses.
Number of discrepancies found	Integer	Mandatory	Total discrepancies identified.
Inventory coordinator	Linked user / text	Mandatory	Who is responsible for the exercise.
Progress status	Controlled vocabulary	Mandatory	e.g. Not started, In progress, Complete, On hold.

Software Functional Requirements for Inventory

- Ability to generate inventory lists filtered by location, collection area, or object type
- Batch update for inventory outcomes (mark multiple objects as checked at once)
- Barcode/QR code scanning integration for rapid inventory checking
- Discrepancy reporting — list all objects not found or with location mismatches
- Inventory progress dashboard — percentage complete, outstanding items
- Link inventory discrepancies to follow-up actions and track resolution
- Historical inventory records — searchable log of all past inventory checks per object

★ 5. CATALOGUING

Cataloguing creates the full, detailed descriptive record for each object. It goes far beyond the basic identification created at Object Entry or Accessioning, capturing everything known about an object — what it is, how it was made, who made it, when, where, its history, condition, significance, and associated materials.

Minimum Requirements

Minimum Requirement	Why This Matters
Create a catalogue record for every accessioned object	Objects without catalogue records cannot be properly managed, insured, or shared
Use consistent terminology and controlled vocabularies	Enables searching, reporting, and sharing data with other systems
Record sufficient information to identify the object uniquely	Prevents confusion; essential for insurance and legal purposes
Record what is known about the object's creation (maker, date, place)	Core interpretive and research value of the collection
Record the object's provenance and history	Ethical obligation and research value
Have a plan to complete cataloguing of the whole collection	Required for Accreditation — backlog cataloguing must be planned

Required Data Fields — Object Identification Information

Field Name	Type	Required ?	Notes / Purpose
Object number (accession number)	Text	Mandatory	The permanent unique identifier linking all records about this object.
Object name	Text + controlled vocab	Mandatory	The name of the type of object (e.g. 'bowl', 'portrait', 'uniform jacket'). Should use a controlled vocabulary like AAT.
Other name(s)	Text (repeatable)	Optional	Alternative names, local names, previous names.
Brief description	Text	Mandatory	A short summary description suitable for quick identification.
Full description	Text (long)	Recommended	Detailed narrative description of the object.
Number of parts	Integer	Recommended	Total number of parts or components if the object is not a single item.
Part description	Text (repeatable)	Conditional	Description of each part if multi-part.
Object type / category	Controlled vocabulary	Recommended	Broad classification: e.g. Fine Art, Natural History, Social History, Archaeology.
Physical medium / materials	Controlled vocabulary (repeatable)	Recommended	What the object is made of — e.g. Oil on canvas, Silver, Oak, Wool.
Technique	Controlled vocabulary (repeatable)	Optional	How it was made — e.g. Cast, Woven, Engraved, Thrown on wheel.

Field Name	Type	Required ?	Notes / Purpose
Dimensions (height, width, depth, weight, diameter)	Number + unit (repeatable)	Recommended	Key measurements. Should allow multiple measurement types and units.
Inscription / mark / signature	Text (repeatable)	Optional	Any text, marks, stamps, or signatures on the object, with their location noted.
Distinguishing features	Text	Optional	Unusual features, repairs, damage, marks that help identify this specific object.

Required Data Fields — Object Production Information

Field Name	Type	Required ?	Notes / Purpose
Maker / creator name	Text / Linked person or org	Recommended	Who made the object. Should link to a People/Organisation authority record.
Maker role	Controlled vocabulary	Recommended	e.g. Designer, Manufacturer, Publisher, Decorator, Assembler.
Production date	Date (with precision)	Recommended	When the object was made. Must support date ranges and approximate dates (e.g. 'circa 1850', '1850-1860').
Production date (early)	Date	Conditional	Start of production date range.
Production date (late)	Date	Conditional	End of production date range.
Production date qualifier	Controlled vocabulary	Recommended	e.g. Circa, Before, After, Possibly, Dated.
Production place (name)	Text / Linked place record	Recommended	Where the object was made — town, region, country.
Production place (geographic coordinates)	Lat/Long	Optional	For mapping and spatial search.
School / style / period	Controlled vocabulary	Optional	e.g. Georgian, Impressionist, Ming Dynasty.

Required Data Fields — Object Description (Physical)

Field Name	Type	Required ?	Notes / Purpose
Colour	Controlled vocabulary (repeatable)	Optional	Primary and secondary colours.
Shape	Controlled vocabulary	Optional	e.g. Rectangular, Circular, Irregular.
Surface treatment	Text / Controlled vocab	Optional	e.g. Gilded, Painted, Lacquered, Patinated.
Subject depicted	Controlled vocabulary / text (repeatable)	Recommended	What is shown in or on the object (for works of art, photographs, documents).

Field Name	Type	Required ?	Notes / Purpose
Associated concept / theme	Controlled vocabulary (repeatable)	Optional	Broader themes or concepts the object relates to — e.g. Industry, Religion, Childhood.
Associated event	Text / Linked record (repeatable)	Optional	Historical events associated with the object.
Associated person	Text / Linked person record (repeatable)	Optional	People associated with the object (not the maker — previous owners, subjects of portraits etc.).
Associated place	Text / Linked place record (repeatable)	Optional	Places associated with the object's history or use.
Associated organisation	Text / Linked org record (repeatable)	Optional	Organisations associated with the object.

Required Data Fields — Object History and Provenance

Field Name	Type	Required ?	Notes / Purpose
Provenance (history of ownership)	Text (long)	Recommended	Full narrative of known ownership history.
Provenance date range	Date range	Optional	Period each provenance entry relates to.
Field collection information	Text	Conditional	Required for archaeological or natural history field-collected objects: site, context, collector, date.
Acquisition from / source	Linked acquisition record	Mandatory	Links to the formal acquisition record.
Owner's contribution notes	Text	Optional	Information provided by the previous owner at the time of acquisition.

Software Functional Requirements for Cataloguing

- Support for controlled vocabularies (ideally linked to or compatible with AAT, TGN, ULAN, or LCSH)
- Repeatable field groups (multiple makers, multiple materials, multiple subjects)
- Flexible date recording — ranges, approximations, qualifiers ('circa', 'before', 'after')
- Full-text search across all catalogue fields
- Image attachment with metadata (photographer, date, copyright)
- Authority file management — linked person, organisation, and place records
- Ability to record and display multi-part objects with part-level records
- Batch editing for common fields across multiple records
- Cataloguing progress tracking — which records are complete/incomplete

★ 6. OBJECT EXIT

Object Exit records all objects leaving your care, for any reason — returns to depositors, outgoing loans, disposals, transfers, and objects sent for conservation. It is the counterpart to Object Entry.

Minimum Requirements

Minimum Requirement	Why This Matters
Record every object leaving your premises	You cannot allow objects to leave without a formal record
Obtain a signed receipt from whoever receives the object	Proof that the object has been formally handed over
Record the reason for exit	Distinguishes loans, disposals, returns — vital for insurance and legal purposes
Record the destination and recipient of the object	Enables tracking and recovery if needed
Record the expected return date for temporary exits	Enables management of overdue returns
Update location and movement records on exit	Keeps location records accurate at all times
Assess condition before exit	Protects against damage claims on return

Required Data Fields — Object Exit Record

Field Name	Type	Required ?	Notes / Purpose
Exit number	Auto-generated ID	Mandatory	Unique identifier for this exit event.
Exit date	Date	Mandatory	Date the object left the premises.
Object number(s)	Linked object record(s)	Mandatory	The accession/entry number(s) of all objects in this exit. Must support batch exits.
Exit reason	Controlled vocabulary	Mandatory	e.g. Return to depositor, Outgoing loan, Transfer to another institution, Disposal, Conservation/repair, Photography, Sale.
Recipient name	Text / Linked person or org	Mandatory	Who received the objects.
Recipient contact details	Address / phone / email	Mandatory	For follow-up, insurance, and recovery if needed.
Destination address	Text / Linked address	Mandatory	Where the objects are going.
Transport method	Controlled vocabulary	Recommended	e.g. Hand-carried, Courier, Specialist art transport, Royal Mail.
Condition at exit	Text / Linked condition record	Recommended	Brief condition note at point of exit — protects against claims on return.
Signed receipt obtained	Boolean + date	Mandatory	Confirmation that the recipient signed for the objects.
Expected return date	Date	Conditional	Required for all temporary exits.
Related process record	Linked record	Conditional	Link to Loans Out, Conservation, or Disposal record as appropriate.

Field Name	Type	Required ?	Notes / Purpose
Insurance / indemnity cover confirmed	Boolean	Recommended	Confirms insurance is in place for the exit period.
Packing notes	Text	Optional	How the object was packed for transit.
Exit authorised by	Linked user / text	Mandatory	Who approved the exit.

Software Functional Requirements for Object Exit

- Batch exit processing — ability to process multiple objects in one exit event
- Automated link to Loans Out record when exit reason is 'Loan'
- Condition check prompt on exit — flag to trigger a condition report before exit
- Receipt generation — printable/emailable exit receipt for the recipient to sign
- Overdue return alerts for temporary exits
- Update object location record automatically to 'Off site — [recipient name]' on exit

★ 7. LOANS IN (Borrowing Objects)

Loans In records objects borrowed by your museum from other institutions, organisations, or individuals for a defined period, typically for exhibitions. Full legal and practical responsibility sits with your museum for the duration.

Minimum Requirements

Minimum Requirement	Why This Matters
Record a formal agreement for every loan in	A signed loan agreement protects both parties legally
Record the lender and their contact details	Needed for communications throughout the loan period
Record the objects being borrowed and their condition	Enables damage claims to be correctly managed
Record insurance or indemnity arrangements for each loan	Required for accountability; determines liability
Record start and end dates for the loan	Enables management of overdue returns
Record where borrowed objects are located within your museum	Accountability for objects in your care
Process the return promptly and update all records	Closes the loan record and clears your liability

Required Data Fields — Loan In Record

Field Name	Type	Required ?	Notes / Purpose
Loan in number	Auto-generated ID	Mandatory	Unique identifier for this loan in.
Loan in title / purpose	Text	Mandatory	e.g. 'Summer exhibition 2025 — loan from National Museum'.
Lender name	Text / Linked person or org	Mandatory	Who the objects are being borrowed from.
Lender contact details	Address / phone / email	Mandatory	Key contact at the lending institution for all loan-related matters.
Loan agreement reference	Text / File attachment	Mandatory	Reference to the signed loan agreement or the document itself.
Loan agreement signed date	Date	Mandatory	When the agreement was formally signed.
Loan start date	Date	Mandatory	When the loan officially begins (objects arrive).
Loan end date	Date	Mandatory	When the loan officially ends (objects must be returned).
Objects on loan (list)	Linked object / entry records	Mandatory	The specific objects borrowed, linked to the lender's identifier and your own entry record.
Lender's object number(s)	Text (repeatable)	Mandatory	The lender's own reference numbers for their objects.
Condition on arrival	Text / Linked condition record	Mandatory	Condition of each object when it arrives — typically a formal condition report.
Condition on return	Text / Linked condition record	Mandatory	Condition of each object when returned — for comparison and damage assessment.

Field Name	Type	Required ?	Notes / Purpose
Insurance type	Controlled vocabulary	Mandatory	e.g. Your own policy, Lender's own policy, Government Indemnity Scheme.
Insurance / indemnity value	Currency	Mandatory	Agreed valuation for insurance purposes.
Insurance policy reference	Text	Conditional	If insured under your own policy.
Indemnity reference	Text	Conditional	If covered by Government Indemnity Scheme.
Location within your museum	Linked location record	Mandatory	Where the borrowed objects are displayed or stored.
Courier / transport arrangements	Text	Recommended	How objects arrive and are returned — courier details, transit insurance.
Environmental requirements	Text	Recommended	Temperature, humidity, light level requirements specified by the lender.
Display requirements / restrictions	Text	Recommended	e.g. 'Must not be displayed under natural light', 'Requires specific mount'.
Return confirmed	Boolean + date	Mandatory	Confirms objects were returned to the lender and they acknowledged receipt.
Loan coordinator	Linked user / text	Mandatory	Staff member managing this loan.

Software Functional Requirements for Loans In

- Loan agreement tracking — status workflow (Requested, Agreed, Active, Returned, Cancelled)
- Object-level records within the loan — link to individual object entries
- Condition report attachment and comparison (arrival vs return)
- Loan end date alerts — configurable advance warning before loan expires
- Integration with Location records — objects on loan in should have their own location
- Insurance/indemnity management — links to Valuation and Insurance records
- Ability to generate a loan agreement document or facility report

★ 8. LOANS OUT (Lending Objects)

Loans Out records objects from your permanent collection that are lent to other institutions or individuals for a defined period. Your museum retains legal ownership but the borrower takes on responsibility for care.

Required Data Fields — Loan Out Record

Field Name	Type	Required ?	Notes / Purpose
Loan out number	Auto-generated ID	Mandatory	Unique identifier.
Borrower name	Text / Linked org or person	Mandatory	Who is borrowing the object(s).
Borrower contact details	Address / phone / email	Mandatory	Key contact for all loan matters.
Borrower facility report reference	Text / File attachment	Recommended	Confirms the borrowing venue meets your environmental and security requirements.
Object(s) on loan	Linked accession records	Mandatory	The specific objects being lent — linked to their full catalogue records.
Purpose of loan	Text / Controlled vocab	Mandatory	e.g. Exhibition, Research, Photography, Education.
Loan agreement reference	Text / File attachment	Mandatory	Signed loan agreement document or reference.
Loan start date	Date	Mandatory	When the loan begins.
Loan end date	Date	Mandatory	When the objects must be returned.
Insurance / indemnity arrangements	Controlled vocabulary	Mandatory	e.g. Borrower's policy, Government Indemnity Scheme, Your own policy.
Insurance / indemnity value	Currency	Mandatory	Agreed valuation for insurance purposes.
Condition at exit (outgoing)	Linked condition record	Mandatory	Formal condition report at point of sending.
Condition at return (incoming)	Linked condition record	Mandatory	Formal condition report when object returns.
Transport / courier arrangements	Text	Recommended	How the object travels — specialist courier, packing requirements.
Approved by	Linked user / text	Mandatory	Who authorised the loan.
Loan fee (if applicable)	Currency	Optional	Any charge made for the loan.
Return confirmed	Boolean + date	Mandatory	Objects returned and received back in agreed condition.
Object location during loan	Text / Linked location	Mandatory	Recorded as 'On loan to [borrower name]' in your location records.

Software Functional Requirements for Loans Out

- Condition check trigger on departure and return

- Loan status workflow (Requested, Approved, Active, Returned, Overdue, Cancelled)
- Loan out alert system for return date reminders
- Automatic location update to 'On loan' on exit and reversal on return
- Ability to generate a Conditions of Loan document for the borrower
- Integration with Object Exit and Object Entry records
- Loan history per object — searchable record of all loans for each accession

★ 9. DOCUMENTATION PLANNING

Documentation Planning is the overarching framework that governs how your museum manages all of its documentation. It is the policy and planning layer that ensures all other procedures are carried out consistently and to an agreed standard.

Minimum Requirements

Minimum Requirement	Why This Matters
Have a written documentation policy	Sets the framework and commitment for all collections documentation
Have a documentation plan that prioritises backlogs	Required for Accreditation — demonstrates awareness of and progress on backlogs
Define who is responsible for documentation	Accountability for documentation standards
Set minimum standards for each type of record	Ensures consistency across staff and over time
Review and update the documentation plan regularly	Plans must reflect reality and progress
Identify and plan to address documentation backlogs	Required for Accreditation — you must have a plan even if not yet complete

Required Data Fields — Documentation Plan

Field Name	Type	Required ?	Notes / Purpose
Documentation plan reference	Text / ID	Mandatory	Unique reference for the current documentation plan.
Plan version / date	Date	Mandatory	When the plan was last reviewed/updated.
Responsible person(s)	Linked user / text	Mandatory	Who is accountable for implementing the plan.
Scope of collection documented	Percentage / text	Mandatory	What proportion of the collection has complete records — overall and by procedure.
Backlog description (by procedure)	Text (repeatable)	Mandatory	Description of documentation backlogs for each Spectrum procedure.
Priority order for backlog work	Ranked list	Mandatory	Which backlogs are being addressed first and why.
Target completion dates (by task)	Date (repeatable)	Recommended	Realistic targets for addressing each element of the backlog.
Resources allocated	Text	Recommended	Staff time, volunteer time, digitisation budget allocated to documentation.
Progress review date	Date	Mandatory	When the plan will next be formally reviewed.
Documentation standards in use	Text	Mandatory	Which controlled vocabularies, thesauri, and standards are used (e.g. Spectrum, AAT, ISAD(G)).
Systems in use	Text	Mandatory	Which collections management system(s) and other tools are used.

Software Functional Requirements for Documentation Planning

- Dashboard showing documentation completeness by procedure and collection area

- Ability to flag records as complete / incomplete for each type of record
- Backlog reporting — how many records lack key fields (e.g. no accession number, no location, no condition record)
- Configurable required fields — ability to mark fields as mandatory and report on completion
- Audit trail for all record creation and modification

ADDITIONAL PROCEDURES (Full Spectrum Compliance)

The following 12 procedures are not required for Accreditation but are required for full Spectrum 5.1 compliance. A fully compliant system must support all of them.

10. USE OF COLLECTIONS

Records how the collection and its associated data (including images) are used — by the museum itself, by researchers, by the public — and captures knowledge generated through use.

Required Data Fields — Use Record

Field Name	Type	Required ?	Notes / Purpose
Use reference number	Auto ID	Mandatory	Unique identifier for this use event.
Object(s) used	Linked object records	Mandatory	Which objects (or reproductions/data) were used.
Use type	Controlled vocabulary	Mandatory	e.g. Exhibition, Research, Publication, Education, Handling session, Photography, Film/broadcast, Online publication.
Use title / description	Text	Mandatory	Name of the exhibition, publication, research project etc.
User name	Text / Linked person or org	Recommended	Who used the collection or data.
Date of use	Date / date range	Mandatory	When the use took place.
Location of use	Text / Linked location	Recommended	Where (gallery, external venue, online).
Information generated	Text / File attachment	Recommended	Exhibition text, research findings, user-generated content (reminiscences, corrections).
Copyright / reproduction permission granted	Boolean + reference	Conditional	If image/data was reproduced — links to Reproduction record.
Access restrictions	Text / Boolean	Optional	Any restrictions on how the object can be used.

11. CONDITION CHECKING AND TECHNICAL ASSESSMENT

Records the physical condition of objects at a point in time. Condition checks are triggered by specific events (loans, exhibitions, acquisitions) and by scheduled programmes.

Required Data Fields — Condition Check Record

Field Name	Type	Required ?	Notes / Purpose
Condition check reference	Auto ID	Mandatory	Unique reference for this condition check event.

Field Name	Type	Required ?	Notes / Purpose
Object number	Linked object record	Mandatory	The object being checked.
Check date	Date	Mandatory	When the condition check was carried out.
Checked by	Linked user / text	Mandatory	Who conducted the check — conservator, curator.
Overall condition rating	Controlled vocabulary	Mandatory	e.g. Good, Fair, Poor, Very Poor (or a numeric scale such as 1–5).
Condition description	Text (long)	Mandatory	Detailed narrative description of the object's condition.
Specific condition issues	Controlled vocabulary (repeatable)	Recommended	e.g. Fading, Cracking, Previous repair, Insect damage, Mould, Structural weakness.
Condition location on object	Text / diagram reference	Recommended	Where on the object the condition issue is located.
Reason for check	Controlled vocabulary	Mandatory	e.g. Routine, Pre-loan, Post-loan, Pre-exhibition, Post-exhibition, Acquisition, Damage report.
Hazard note	Text / Boolean	Recommended	Flags objects with handling hazards (e.g. asbestos, lead paint, heavy).
Images taken	Image attachment (repeatable)	Recommended	Condition photographs with locations noted.
Recommendations	Text	Recommended	Suggested conservation or handling actions.
Priority for treatment	Controlled vocabulary	Recommended	e.g. Urgent, High, Medium, Low, Monitor.
Next check due date	Date	Recommended	When this object should be checked again.

12. COLLECTIONS CARE AND CONSERVATION

Records conservation treatments, preventive care measures, and collection environment monitoring applied to objects.

Required Data Fields — Conservation/Treatment Record

Field Name	Type	Required ?	Notes / Purpose
Treatment reference	Auto ID	Mandatory	Unique identifier for this conservation or treatment record.
Object number	Linked object record	Mandatory	The object treated.
Treatment type	Controlled vocabulary	Mandatory	e.g. Cleaning, Stabilisation, Repair, Rehousing, Preventive conservation, Environmental improvement.

Field Name	Type	Required ?	Notes / Purpose
Conservator name	Text / Linked person or org	Mandatory	Who carried out the treatment.
Treatment start date	Date	Mandatory	When treatment began.
Treatment end date	Date	Mandatory	When treatment was completed.
Condition before treatment	Text / Linked condition record	Mandatory	State of the object before treatment.
Condition after treatment	Text / Linked condition record	Mandatory	State of the object after treatment.
Treatment description	Text (long)	Mandatory	Full description of materials used, methods applied, and outcomes.
Materials used	Text (repeatable)	Recommended	Specific conservation materials (adhesives, consolidants, etc.) for future reference.
Cost of treatment	Currency	Optional	For budgeting and reporting.
Recommendation for future	Text	Recommended	Ongoing care requirements or follow-up actions.
Images (before/after)	Image attachment (repeatable)	Recommended	Before and after photographs.
Treatment report attachment	File attachment	Recommended	Full written conservation report if produced.

13. VALUATION

Records formal valuations of objects in the collection, typically for insurance, probate, sale, or financial reporting purposes.

Required Data Fields — Valuation Record

Field Name	Type	Required ?	Notes / Purpose
Valuation reference	Auto ID	Mandatory	Unique identifier for this valuation event.
Object(s) valued	Linked object records	Mandatory	Which objects have been valued.
Valuation date	Date	Mandatory	When the valuation was carried out.
Valuer name	Text / Linked person or org	Mandatory	Who conducted the valuation — should be a qualified professional for formal purposes.
Valuation purpose	Controlled vocabulary	Mandatory	e.g. Insurance, Probate, Sale, Donation, Annual review, Grant application.
Valuation amount	Currency	Mandatory	The assessed value in a specified currency.
Valuation currency	Controlled vocabulary	Mandatory	GBP, USD, EUR etc.
Valuation basis	Text / Controlled vocab	Mandatory	e.g. Replacement value, Market value, Open market value.
Valuation validity date	Date	Recommended	When the valuation expires and should be reviewed.
Related insurance record	Linked record	Recommended	Links to the Insurance record using this valuation.
Valuation report attachment	File attachment	Recommended	The formal valuation document.

14. INSURANCE AND INDEMNITY

Records insurance cover and Government Indemnity Scheme (GIS) arrangements for the collection and for individual objects on loan.

Required Data Fields — Insurance Record

Field Name	Type	Required ?	Notes / Purpose
Insurance reference	Auto ID	Mandatory	Unique identifier for this insurance record.
Object(s) covered	Linked object records	Mandatory	Which objects are covered (may be entire collection or specific items).
Insurance type	Controlled vocabulary	Mandatory	e.g. Own policy (all risks), Government Indemnity Scheme, Borrower's policy, Self-insured.
Insurer name	Text / Linked org	Conditional	Name of insurance company if commercially insured.

Field Name	Type	Required ?	Notes / Purpose
Policy reference	Text	Conditional	Policy number or reference.
Indemnity reference	Text	Conditional	GIS reference number if applicable.
Cover start date	Date	Mandatory	When cover begins.
Cover end date	Date	Mandatory	When cover ends — triggers renewal alerts.
Insured value	Currency	Mandatory	Total insured value.
Per-object insured value	Currency	Conditional	Individual object values where specified separately.
Cover conditions / exclusions	Text	Recommended	Any conditions or exclusions that affect the collection's use or display.
Renewal alert date	Date	Recommended	Date to trigger renewal reminder — typically 3 months before expiry.
Related loan record	Linked record	Conditional	Link to a specific Loans In or Loans Out record if cover is loan-specific.

15. EMERGENCY PLANNING FOR COLLECTIONS

Records emergency and disaster plans for the collection, including priorities for salvage, response procedures, and outcomes of any emergency events.

Required Data Fields — Emergency Plan Record

Field Name	Type	Required ?	Notes / Purpose
Emergency plan reference	Auto ID / text	Mandatory	Unique reference for the plan.
Plan version / date	Date	Mandatory	When the plan was last reviewed.
Responsible person	Linked user / text	Mandatory	Who is responsible for implementing the plan.
Priority salvage list	Linked object records (ranked)	Mandatory	Objects to be saved first in an emergency, in priority order.
Priority object location	Linked location	Mandatory	Where priority objects are currently held — must be kept up to date.
Emergency contact list	Text / Linked records	Mandatory	Key contacts: conservators, salvage teams, insurers, building managers.
Emergency response procedures	Text / File attachment	Mandatory	Step-by-step response for different emergency types: flood, fire, theft, structural failure.
Salvage equipment location	Text	Mandatory	Where emergency salvage materials are stored.
Plan last tested / exercised	Date	Recommended	When staff last practised the emergency procedures.
Plan next review date	Date	Mandatory	Scheduled review date.

Required Data Fields — Emergency Event Record

Field Name	Type	Required ?	Notes / Purpose
Emergency event reference	Auto ID	Mandatory	Unique reference for this incident.
Date of event	Date	Mandatory	When the emergency occurred.
Type of emergency	Controlled vocabulary	Mandatory	e.g. Flood, Fire, Theft, Vandalism, Structural failure, Pest infestation.
Objects affected	Linked object records	Mandatory	Which objects were damaged, lost, or at risk.
Outcome / damage description	Text	Mandatory	Description of damage or loss.
Response actions taken	Text	Mandatory	What was done and when.
Related damage/loss record	Linked record	Mandatory	Links to Damage and Loss records for specific objects.
Insurance claim reference	Text	Conditional	If a claim was made.

16. DAMAGE AND LOSS

Records damage to or loss of objects in the collection, including the circumstances, response, and outcome.

Required Data Fields — Damage/Loss Record

Field Name	Type	Required ?	Notes / Purpose
Damage/loss reference	Auto ID	Mandatory	Unique identifier.
Object number	Linked object record	Mandatory	The affected object.
Date discovered	Date	Mandatory	When damage/loss was discovered.
Date occurred (if known)	Date	Optional	When the damage/loss actually happened.
Type	Controlled vocabulary	Mandatory	e.g. Damage (accidental), Damage (deliberate), Loss (theft), Loss (unknown cause), Deterioration.
Description of damage/loss	Text (long)	Mandatory	Full description of what happened and the extent of damage.
Discovered by	Linked user / text	Mandatory	Who found/reported the problem.
Circumstances	Text	Mandatory	Context in which damage/loss occurred.
Photographs	Image attachment (repeatable)	Mandatory	Images of damage.
Response actions taken	Text	Mandatory	Conservation measures, security review, police report etc.
Police report reference	Text	Conditional	For theft or vandalism.
Insurance claim reference	Text	Conditional	If a claim was filed.
Insurance claim outcome	Text	Conditional	Result of the claim.
Object status after event	Controlled vocabulary	Mandatory	e.g. Repaired, Written off, Still missing, Partly recovered, No action needed.
Reported to governing body	Boolean + date	Recommended	Confirms the incident was reported to the appropriate authority.

17. DEACCESSIONING AND DISPOSAL

Records the formal process of removing objects from the permanent collection. This is one of the most ethically significant procedures and requires governance approval, transparent process, and full documentation.

Required Data Fields — Disposal Record

Field Name	Type	Required ?	Notes / Purpose
Disposal reference	Auto ID	Mandatory	Unique reference for this disposal event.
Object number	Linked accession record	Mandatory	The object being deaccessioned/disposed of.
Reason for disposal	Controlled vocabulary	Mandatory	e.g. Outside collecting scope, Duplicate, Unsuitable for collection, Deteriorated beyond use, Claim of ownership, Transfer to better home.
Disposal justification	Text (long)	Mandatory	Full rationale demonstrating compliance with the collections policy and ethical guidelines.
Governing body approval	Boolean + date + reference	Mandatory	Confirmation that the appropriate authority approved the disposal — name, date, minute reference.
Method of disposal	Controlled vocabulary	Mandatory	e.g. Transfer, Sale, Auction, Destruction, Return to community of origin, Repatriation, Gift.
Recipient of disposed object	Text / Linked org or person	Conditional	Who received the object if transferred, sold, or gifted.
Amount realised (if sold)	Currency	Conditional	Required for audit; proceeds must be used in accordance with ethical guidelines.
Public notice / consultation completed	Boolean + details	Recommended	Record of any public notice or consultation undertaken as required by ethics guidelines.
Deaccession date	Date	Mandatory	Date the object was formally removed from the accession register.
Accession register annotated	Boolean	Mandatory	Confirms the accession register has been updated to reflect disposal.
Disposal outcome documentation	File attachment	Mandatory	Supporting documents: transfer agreement, sale receipt, destruction certificate.
Object record status	Controlled vocabulary	Mandatory	Record should be marked 'Deaccessioned' — never deleted.

ℹ️ *Critical: Disposal records and deaccessioned object records must NEVER be deleted from the system. They must be retained permanently and clearly marked as deaccessioned. The system must prevent deletion of accession records.*

18. RIGHTS MANAGEMENT

Records intellectual property rights, copyright, and other rights associated with objects, their reproductions, and associated texts — both rights held by the museum and rights held by others.

Required Data Fields — Rights Record

Field Name	Type	Required ?	Notes / Purpose
Rights reference	Auto ID	Mandatory	Unique identifier for this rights record.
Object / reproduction reference	Linked record	Mandatory	The object, image, or text to which these rights apply.
Rights type	Controlled vocabulary	Mandatory	e.g. Copyright, Moral rights, Cultural property rights, Traditional knowledge, Database rights.
Rights holder name	Text / Linked person or org	Mandatory	Who holds the right.
Rights holder contact details	Address / phone / email	Recommended	For rights clearance enquiries.
Rights status	Controlled vocabulary	Mandatory	e.g. In copyright (rights holder known), In copyright (rights holder unknown), Public domain, Orphan work, Open licence.
Rights expiry date	Date	Conditional	When copyright expires (e.g. 70 years after creator's death in UK).
Licence type / terms	Text / Controlled vocab	Conditional	e.g. Creative Commons BY, CC BY-NC, All rights reserved, Specific usage terms.
Restrictions on use	Text	Recommended	Any restrictions on reproduction, display, or commercial use.
Rights in obtained	Boolean + details	Conditional	If the museum has obtained a licence to use others' rights — terms and reference.
Rights out granted	Boolean + details	Conditional	If the museum has licensed its rights to others — to whom, terms, duration.
Notes	Text	Optional	Any additional context or unresolved questions.

19. REPRODUCTION

Records requests for and the production of reproductions of objects or their associated data — photographs, scans, prints, casts, 3D models.

Required Data Fields — Reproduction Record

Field Name	Type	Required ?	Notes / Purpose
Reproduction reference	Auto ID	Mandatory	Unique identifier.
Object(s) reproduced	Linked object records	Mandatory	What was reproduced.
Reproduction type	Controlled vocabulary	Mandatory	e.g. Photograph, High-resolution scan, Print, Cast, 3D model, Film/video.
Requester name	Text / Linked person or org	Recommended	Who requested the reproduction.
Purpose of reproduction	Controlled vocabulary	Mandatory	e.g. Publication, Exhibition, Research, Commercial, Personal use, Loan facility report.
Date of reproduction	Date	Mandatory	When the reproduction was made.
Reproduced by	Text / Linked person	Mandatory	Who carried out the reproduction (photographer, 3D scanner operator etc.).
Rights clearance confirmed	Boolean	Mandatory	Confirms rights to reproduce have been checked and obtained.
Licence terms for this reproduction	Text / Linked rights record	Mandatory	Terms under which the reproduction may be used.
Fee charged (if any)	Currency	Optional	Commercial reproduction fee.
Image/file reference	File reference / DAM link	Mandatory	Where the digital reproduction is stored.
Credit line / attribution	Text	Mandatory	How the museum must be credited when the reproduction is published.

20. COLLECTIONS REVIEW

A systematic review of all or part of the collection to assess its relevance, condition, and future — informing decisions about retention, development, cataloguing priorities, and disposal.

Required Data Fields — Collections Review

Field Name	Type	Required ?	Notes / Purpose
Review reference	Auto ID	Mandatory	Unique reference for this review exercise.
Review scope	Text / Controlled vocab	Mandatory	What part of the collection is being reviewed — specific area, period, or object type.
Review date range	Date range	Mandatory	When the review took place.

Field Name	Type	Required ?	Notes / Purpose
Review coordinator	Linked user / text	Mandatory	Who led the review.
Review criteria	Text	Mandatory	What criteria are being used to assess objects — typically derived from the collecting policy.
Object review outcome (per object)	Controlled vocabulary	Mandatory	e.g. Retain — core collection, Retain — display, Transfer, Dispose, Investigate further, Upgrade documentation.
Review notes (per object)	Text	Recommended	Justification for the decision on each object.
Actions arising	Text (repeatable)	Mandatory	What needs to happen as a result of the review.
Governing body approval (if disposal recommended)	Boolean + date	Conditional	Required before any disposal proceeds.
Review report	File attachment	Recommended	Written summary of the review findings.

21. AUDIT

A formal check that the records in the system accurately reflect the actual physical collection — that objects exist, are where they are recorded, and that records are complete and accurate.

Required Data Fields — Audit Record

Field Name	Type	Required ?	Notes / Purpose
Audit reference	Auto ID	Mandatory	Unique identifier for this audit event.
Audit scope	Text / Controlled vocab	Mandatory	What was audited — full collection, location, collection area.
Audit date / date range	Date range	Mandatory	When the audit took place.
Auditor(s)	Linked user / text	Mandatory	Who conducted the audit — should include someone independent of day-to-day collections management.
Audit method	Text / Controlled vocab	Mandatory	e.g. Physical inspection, Barcode scan, Sample audit.
Number of objects audited	Integer	Mandatory	Total number of objects checked.
Number with no discrepancy	Integer	Mandatory	Objects confirmed present and correctly recorded.
Number with discrepancy	Integer	Mandatory	Objects with any mismatch between record and reality.
Audit outcome (per object)	Controlled vocabulary	Mandatory	e.g. Verified, Not found, Location differs, Record incomplete, Condition differs from record.
Discrepancy notes (per object)	Text	Conditional	Detail of any discrepancy found.

Field Name	Type	Required ?	Notes / Purpose
Actions required	Text / Linked actions	Mandatory	What needs to be done to resolve discrepancies.
Actions completed	Boolean + date (per action)	Mandatory	Confirmation that follow-up has been done.
Overall audit report	File attachment / text	Mandatory	Written summary of the audit findings and outcomes.
Reported to governing body	Boolean + date	Recommended	Audit findings should be reported upward for governance purposes.

SUMMARY: Spectrum Compliance — Procedure & Field Count

The table below summarises each procedure, the approximate number of data fields required, and the key functional capabilities a compliant system must provide.

#	Procedure	~Fields	Key Software Capability
★ 1	Object Entry	22	Receipt generation, risk flags, workflow to acquisition/loans
★ 2	Acquisition & Accessioning	22	Accession number generation, ethics checklists, register
★ 3	Location & Movement	12+6	Hierarchical locations, movement logging, overdue alerts
★ 4	Inventory	10+8	Inventory lists, barcode scanning, discrepancy reports
★ 5	Cataloguing	30+	Controlled vocabs, authority files, repeatable fields
★ 6	Object Exit	16	Receipt generation, condition trigger, auto-location update
★ 7	Loans In	22	Agreement tracking, condition reports, indemnity/insurance
★ 8	Loans Out	18	Status workflow, return alerts, auto-location 'On Loan'
★ 9	Documentation Planning	11	Completeness dashboard, backlog reports, required fields
10	Use of Collections	10	Event logging, link to reproduction records
11	Condition Checking	15	Condition ratings, image attach, priority flags
12	Conservation & Treatment	15	Before/after records, materials log, report attach
13	Valuation	11	Currency fields, expiry alerts, insurance linkage
14	Insurance & Indemnity	13	Cover dates, renewal alerts, loan linkage
15	Emergency Planning	10+8	Priority salvage list, emergency contacts, event log
16	Damage and Loss	16	Photo attach, police ref, insurance claim tracking
17	Deaccessioning & Disposal	13	Governance approval, no-delete protection, register update
18	Rights Management	12	Rights status vocab, restrictions, in/out licensing
19	Reproduction	12	Rights clearance, DAM link, credit line, fee tracking
20	Collections Review	10	Per-object outcomes, action tracking, disposal trigger
21	Audit	14	Discrepancy log, action tracking, governance reporting

★ = Primary Procedure (required for UK Arts Council Accreditation). Fields marked 'Mandatory' across all procedures total over 250 discrete data points. A fully compliant Spectrum 5.1 system must support all 21 procedures and their associated fields, functional workflows, controlled vocabularies, and reporting capabilities.
